50 Words	The Flash Voyager GTX USB 3.0 flash drive uses an SSD controller for performance that rivals solid-state drives. Files transfer at twice the speed of other high-performance USB drives, so you can manage enormous files and spend less quality time with the progress bar. And, it's lightweight and compact, with a durable brushed metal housing.
100 Words	Most USB drives are fast… until it's time to copy a large file and you're looking at a progress bar that lingers around too long. The solution? Integrate an SSD controller into a drive. Flash Voyager GTX gives you transfer speed that rivals your PC's solid-state drive. And, unlike some devices, Flash Voyager GTX delivers amazingly fast performance with large files, small files, and everything in between. It works with USB 2.0 and USB 3.0 ports on Windows, OS X and Linux systems, with no driver installation necessary. And best of all, it's light and compact, with a durable brushed metal housing that looks fast, too.
